Key statistics

For June 2025:

- There were 948,900 multiple job-holders (6.4% of employed people)
- 7.5% of employed women were multiple job-holders, compared to 5.1% of employed men
- Workers aged 20-24 years old were most likely to be working multiple jobs (7.0%)
- People who were a Community and personal service worker in their main job were most likely to be a multiple job-holder (10.4%).

Sources of multiple job-holder data

This multi-source release, published alongside the quarterly Labour Account, supports headline estimates in the Labour Account by providing additional detail on the characteristics of multiple job-holders.

This release brings together data from the following ABS sources on multiple job-holders:

- [Labour Account, June quarter 2025 \(/statistics/labour/labour-accounts/labour-account-australia/jun-2025\)](#) – headline estimates of the level and rate of multiple job-holding, by industry
- [Labour Force, Australia, June 2025 \(/statistics/labour/employment-and-unemployment/labour-force-australia/](#)

[jun-2025](#)) – detailed socio-demographic and employment characteristics of multiple job-holders

- [Jobs in Australia, 2021-22 \(/statistics/labour/jobs/jobs-australia/2021-22-financial-year\)](#) – selected characteristics of multiple job-holders, based on personal income tax data available from the Linked Employer-Employee Dataset (LEED).

Data impacts and changes

Revisions this quarter

Data in the Multiple job-holders release has been revised from previously published estimates. These include revisions to:

- Labour Account data attributed to revisions to quarterly source data
- Labour Force summary statistics attributed to revisions to monthly and quarterly source data.

Multiple job-holding over time

In June 2025, there were 948,900 multiple job-holders, compared to 14.0 million single job-holders. This was down 1.3% from March 2025 when there were 961,100 multiple job-holders.

Between 1994 and 2019, the multiple job-holding rate remained between 5.0% and 6.0%. However, following a large decline in June 2020 as a result of the COVID-19 pandemic, the multiple job-holding rate rose and has remained at an all time high between 6.4% and 6.7% since June 2022.

Multiple job-holding rate and levels

Source: [Labour Account Australia \(/statistics/labour/labour-accounts/labour-account-australia/jun-2025\)](#). (seasonally adjusted)

Sex

In June 2025, the rate of multiple job-holding was higher for women (7.5% compared with 5.1% for men). Over the past five years, on average, the multiple job-holding rate amongst women has been around 1.8 percentage points higher than men.

Multiple job-holding rate and levels by sex

Note: The sum of males and females does not equal the headline estimates of multiple job-holders from the Labour Account as the number of male and female multiple job-holders is sourced directly from the Labour Force Survey. The Labour Account includes adjustments to account for populations which are out of scope for the Labour Force Survey, namely child workers, short-term non-residents and defence force personnel.

Age

Employed people aged 20-24 were most likely to hold more than one job in June 2025 (7.0%). In contrast, 5.0% of employed people aged 65 years and over were multiple job-holders.

Multiple job-holding rate by age group

Estimates for smaller age groups are generally based on smaller counts and are subject to higher degrees of sampling variability.

Industry

People working in the Administrative and support services industry in their main job had the highest multiple job-holding rate in June 2025 (8.9%). Multiple job-holding was least common among people whose main job was in Electricity, gas, water and waste services (3.3%).

It is important to note that some industries lend themselves to multiple job-holding. For example, some workers in Agriculture, forestry and fishing may work several seasonal jobs for different employers in addition to their main job; and some [labour hire workers \(/statistics/labour/earnings-and-working-conditions/labour-hire-workers/latest-release\)](#) may work for a number of businesses in Administrative and support services.

Levels and rate of multiple job-holding, by sex, by industry

Note: Multiple job-holding rate and levels are taken from the Labour Account. The number of male and female multiple job-holders by industry are derived from Jobs in Australia, and applied to the Labour Account level estimate.

Source: [Labour Account Australia \(/statistics/labour/labour-accounts/labour-account-australia/jun-2025\)](https://statistics/labour/labour-accounts/labour-account-australia/jun-2025) (seasonally adjusted) and [Jobs in Australia 2021-22 \(/statistics/labour/jobs/jobs-australia/2021-22-financial-year\)](https://statistics/labour/jobs/jobs-australia/2021-22-financial-year) (original)

The following diagrams show [Jobs in Australia \(/statistics/labour/jobs/jobs-australia/2021-22-financial-year\)](https://statistics/labour/jobs/jobs-australia/2021-22-financial-year) data for the most common combinations of industries of male and female multiple job-holder's main and second concurrent job.

For example, most female multiple job-holders whose main job was in Health care and social assistance also had their second job in Health care and social assistance, but there were many women whose main job was in Health care and social assistance and their second job in either Administrative and support services, Education and training, Retail trade or Accommodation and food services.

The data can be found in Jobs in Australia [Table 4 \(/statistics/labour/jobs/jobs-australia/2021-22-financial-year#data-downloads\)](https://statistics/labour/jobs/jobs-australia/2021-22-financial-year#data-downloads).

Industry of main and second job of female multiple job-holders, 2021-22

Industry of main and second job of male multiple job-holders, 2021-22

Occupation

In May 2025, 10.4% of all people who were a Community and personal service worker in their main job were multiple job-holders. Machinery operators and drivers were least likely to be a multiple job-holder (4.4%).

Levels and rate of multiple job-holding, by sex by occupation, May 2025

Note: The sum of occupations does not equal the headline estimate of multiple job-holders from the Labour Account as the number of multiple job-holders, by occupation is sourced directly from the Labour Force Survey. The Labour Account includes adjustments to account for populations which are out of scope for the Labour Force Survey, namely child workers, short-term non-residents and defence force personnel.

Hours worked

In June 2025:

- Multiple job-holders usually worked 29.6 hours, on average, in their main job, and 9.0 hours in their secondary job(s) - a total of 38.6 hours per week, on average
- Single job-holders usually worked 38.1 hours per week, on average.

Average usual hours worked, June 2025

Source: [Longitudinal Labour Force, Australia \(/statistics/microdata-tablebuilder/available-microdata-tablebuilder/longitudinal-labour-force-australia\)](#). (original)

Multiple job-holders were most likely to work part-time hours (less than 35 hours per week) in both their main and secondary job(s), followed by a combination of full-time and part-time hours. There were a small number of people who had two full-time jobs.

Multiple job-holders by actual full-time or part-time hours

Note: The full-time / part-time hours categories are based on hours actually worked in the reference week, so exclude employed people who were away from work.

Geography

In June 2025, the multiple job-holding rate was slightly higher in regional areas (6.4%) compared to capital cities (6.2%).

From December 2021 to December 2022, growth in multiple job-holding rates in capital cities led to a narrowing of the difference between rates in capital cities and the rest of Australia.

More recently, the rates of multiple job-holding in both capital cities and the rest of Australia have been declining.

Multiple job-holding rate

Source: [Labour Force, Australia \(/statistics/labour/employment-and-unemployment/labour-force-australia/jun-2025\)](#). (original)

In June 2025, the multiple job-holding rate was highest in:

- Capital city: Greater Hobart (10.3%)
- Rest of state or territory: Tasmania (8.9%).
